Smart Contract
Security Audit Report

Table Of Contents

1 Executive Summary

On 2022.09.16, the SlowMist security team received the AnySwap team's security audit application for AnySwap AnyCall App, developed the audit plan according to the agreement of both parties and the characteristics of the project, and finally issued the security audit report.

The SlowMist security team adopts the strategy of "white box lead, black, grey box assists" to conduct a complete security test on the project in the way closest to the real attack.

The test method information:

Test method	Description
Black box testing	Conduct security tests from an attacker's perspective externally.
Grey box testing	Conduct security testing on code modules through the scripting tool, observing the internal running status, mining weaknesses.
White box testing	Based on the open source code, non-open source code, to detect whether there are vulnerabilities in programs such as nodes, SDK, etc.

The vulnerability severity level information:

Level	Description
Critical	Critical severity vulnerabilities will have a significant impact on the security of the DeFi project, and it is strongly recommended to fix the critical vulnerabilities.
High	High severity vulnerabilities will affect the normal operation of the DeFi project. It is strongly recommended to fix high-risk vulnerabilities.
Medium	Medium severity vulnerability will affect the operation of the DeFi project. It is recommended to fix medium-risk vulnerabilities.
Low	Low severity vulnerabilities may affect the operation of the DeFi project in certain scenarios. It is suggested that the project team should evaluate and consider whether these vulnerabilities need to be fixed.
Weakness	There are safety risks theoretically, but it is extremely difficult to reproduce in engineering.

Level	Description
Suggestion	There are better practices for coding or architecture.

2 Audit Methodology

The security audit process of SlowMist security team for smart contract includes two steps:

Smart contract codes are scanned/tested for commonly known and more specific vulnerabilities using automated analysis tools.

Manual audit of the codes for security issues. The contracts are manually analyzed to look for any potential problems.

Following is the list of commonly known vulnerabilities that was considered during the audit of the smart contract:

Serial Number	Audit Class	Audit Subclass
1	Overflow Audit	-
2	Reentrancy Attack Audit	-
3	Replay Attack Audit	-
4	Flashloan Attack Audit	-
5	Race Conditions Audit	Reordering Attack Audit
6	Permission Vulnerability Audit	Access Control Audit
		Excessive Authority Audit

Serial Number	Audit Class	Audit Subclass
7	Security Design Audit	External Module Safe Use Audit
		Compiler Version Security Audit
		Hard-coded Address Security Audit
		Fallback Function Safe Use Audit
		Show Coding Security Audit
		Function Return Value Security Audit
		External Call Function Security Audit
		Block data Dependence Security Audit
		tx.origin Authentication Security Audit
8	Denial of Service Audit	-
9	Gas Optimization Audit	-
10	Design Logic Audit	-
11	Variable Coverage Vulnerability Audit	-
12	"False Top-up" Vulnerability Audit	-
13	Scoping and Declarations Audit	-
14	Malicious Event Log Audit	-
15	Arithmetic Accuracy Deviation Audit	-
16	Uninitialized Storage Pointer Audit	-

3 Project Overview

3.1 Project Introduction

Audit Version

Project address: https://github.com/anyswap/anyswap-v1-core

commit: c019e0e5b5e82f5893843508b6eb15346fe88bac

Audit scope:

- anyswap-v1-core/contracts/anycall_app/ERC721Gateway_LILO.sol
- anyswap-v1-core/contracts/anycall_app/ERC721Gateway_MintBurn.sol
- anyswap-v1-core/contracts/ERC721Gateway.sol
- anyswap-v1-core/contracts/AnyCallApp.sol
- anyswap-v1-core/contracts/Administrable.sol

Fixed Version

Project address: https://github.com/anyswap/anyswap-v1-core

commit: c7a2b990215f0a38566e74815ee535daec095220

Audit scope:

- anyswap-v1-core/contracts/anycall_app/ERC721Gateway_LILO.sol
- anyswap-v1-core/contracts/anycall_app/ERC721Gateway_MintBurn.sol
- anyswap-v1-core/contracts/ERC721Gateway.sol
- anyswap-v1-core/contracts/AnyCallApp.sol
- anyswap-v1-core/contracts/Administrable.sol

3.2 Vulnerability Information

The following is the status of the vulnerabilities found in this audit:

NO	Title	Category	Level	Status
N1	Missing event record	Others	Suggestion	Fixed
N2	Risk of excessive authority	Authority Control Vulnerability	Low	Fixed

4 Code Overview

4.1 Contracts Description

The main network address of the contract is as follows:

The code was not deployed to the mainnet.

4.2 Visibility Description

The SlowMist Security team analyzed the visibility of major contracts during the audit, the result as follows:

ERC721Gateway_LILO			
Function Name	Visibility	Mutability	Modifiers
<Constructor>	Public	Can Modify State	ERC721Gateway
_swapout	Internal	Can Modify State	-
_swapin	Internal	Can Modify State	-

ERC721Gateway			
Function Name	Visibility	Mutability	Modifiers
<Constructor>	Public	Can Modify State	AnyCallApp

ERC721Gateway			
_swapout	Internal	Can Modify State	-
_swapin	Internal	Can Modify State	-
Swapout_no_fallback	External	Payable	-
_anyExecute	Internal	Can Modify State	-

AnyCallApp			
Function Name	Visibility	Mutability	Modifiers
<Constructor>	Public	Can Modify State	-
setPeers	Public	Can Modify State	onlyAdmin
getPeer	External	-	-
setAnyCallProxy	Public	Can Modify State	onlyAdmin
_anyExecute	Internal	Can Modify State	-
_anyCall	Internal	Can Modify State	-
anyExecute	External	Can Modify State	onlyExecutor

Administrable			
Function Name	Visibility	Mutability	Modifiers
setAdmin	Internal	Can Modify State	-
transferAdmin	External	Can Modify State	onlyAdmin
acceptAdmin	External	Can Modify State	-

ERC721Gateway_MintBurn			
Function Name	Visibility	Mutability	Modifiers
<Constructor>	Public	Can Modify State	ERC721Gateway
_swapout	Internal	Can Modify State	-
_swapin	Internal	Can Modify State	-

4.3 Vulnerability Summary

[N1] [Suggestion] Missing event record

Category: Others

Content

Modifying the sensitive parameters of the contract lacks corresponding event records, which is not conducive to the supervision of the community and users.

Code location: anyswap-v1-core/contracts/AnyCallApp.sol #L23-27

```
    function setPeers(uint256[] memory chainIDs, address[] memory  peers) public
onlyAdmin {
        for (uint i = 0; i < chainIDs.length; i++) {
            peer[chainIDs[i]] = peers[i];
        }
    }
```

Code location: anyswap-v1-core/contracts/AnyCallApp.sol #L33-35

```
    function setAnyCallProxy(address proxy) public onlyAdmin {
        anyCallProxy = proxy;
    }
```

Solution

It is recommended to add corresponding event records.

Status

Fixed

[N2] [Low] Risk of excessive authority

Category: Authority Control Vulnerability

Content

The Admin role has the right to set the anyCallProxy contract address to any address, and the Admin role has the risk of excessive authorization.

Code location: anyswap-v1-core/contracts/AnyCallApp.sol #L33-35

```
    function setAnyCallProxy(address proxy) public onlyAdmin {
        anyCallProxy = proxy;
    }
```

Solution

It is recommended to transfer the permissions of the Admin role to the TimeLock contract or use multi-signature wallet management.

Status

Fixed; This function has been removed.

5 Audit Result

Audit Number	Audit Team	Audit Date	Audit Result
0X002209190003	SlowMist Security Team	2022.09.16 - 2022.09.19	Passed

Summary conclusion: The SlowMist security team use a manual and SlowMist team's analysis tool to audit the project, during the audit work we found 1 suggestion and 1 low risk. All the findings have been fixed. The code was not deployed to the mainnet.

6 Statement

SlowMist issues this report with reference to the facts that have occurred or existed before the issuance of this report, and only assumes corresponding responsibility based on these.

For the facts that occurred or existed after the issuance, SlowMist is not able to judge the security status of this project, and is not responsible for them. The security audit analysis and other contents of this report are based on the documents and materials provided to SlowMist by the information provider till the date of the insurance report (referred to as "provided information"). SlowMist assumes: The information provided is not missing, tampered with, deleted or concealed. If the information provided is missing, tampered with, deleted, concealed, or inconsistent with the actual situation, the SlowMist shall not be liable for any loss or adverse effect resulting therefrom. SlowMist only conducts the agreed security audit on the security situation of the project and issues this report. SlowMist is not responsible for the background and other conditions of the project.
